

Health Alert: Measles outbreak in South-East Asia with cases in Victoria

Measles is a **viral illness that spreads easily**. It often causes a rash and fever and sometimes causes serious illness. **It can be prevented through vaccination.**

There is a **measles outbreak** in **South-East Asia**, especially in Vietnam. Several people from Melbourne have caught measles whilst visiting family or travelling in Vietnam.

To protect yourself and your family from measles:

1. Make sure you're protected against measles

- Talk to your GP if you are born after 1965 and have not had TWO measles vaccines.
- If you are unsure, visit your GP or check the Medicare app to see if you're protected.
- Vaccines are free.

2. If you're travelling to Vietnam, ensure you are vaccinated before you go

- Babies aged 6 to 12 months travelling to countries with measles outbreaks should get an extra measles vaccine.

3. Avoid large gatherings if unwell so you don't spread any infections
